

VOV Government Affairs/BCRUA Committee Meeting – June 11th, 10:00 am

Questions we need answered:

1. What is the overall timeline for the project once construction in any form starts?
2. What is the timeline for the construction of the Maintenance Building, start date and then completion and start of operations.
3. What is the operational truck traffic at the Maintenance Building. What is the kind and size of trucks delivering chemicals and supplies?
4. Marc Dickey – what are the specs per Volente ordinance for a road built on platted right of way and maintained by the Village?
5. Has the BCRUA committed to building the water intake structure off site and bringing it to the Maintenance Building location by barge?
6. How will the BCRUA bore the vertical shaft for the water intake structure? Will they use the tunneling machine? Will they bring it to the site on a barge?
7. Where will the two vertical shafts be drilled to inject cement down to the tunnel? What is the forecast of the number of cement trucks that will come to each of these shafts and over what period of time?

Suggestions to VOV Council

1. We suggest a meeting be held with VOV, CP, and Travis County to discuss this project and its potential impact on Lime Creek Road. The Traffic Study should be reviewed by all three entities and then a consistent set of requirements, agreed to be all three entities, be given and negotiated with the BCRUA.
2. We would like to suggest that repairs be made to Lime Creek Road, specifically in the five hairpin turns between the Village Center and the Village boundary at the Cypress Creek Water Treatment Facility PRIOR to any construction activity at the Pumping Station site.
3. We would like to see the results of a review of the Traffic Study by our newly hired engineer and by our village attorney.
4. Could we request that all chemical deliveries to the Maintenance Building come from the North?

Observations

1. Concern was expressed over workers at the Pumping Station camping or staying in Cypress Creek Park. In section 6.0 DAILY WORKER TRAFFIC AND PARKING it states that “it would be possible to have workers walk to the Pump Station site from the offsite parking at Sandy Lake (sic) Park”. It does indicate that the park provides only primitive

camp sites and is owned and maintained by Travis County. Therefore Travis County would have to approve ANY use of the park by the BCRUA.

2. We are concerned about the water usage at the Maintenance Building. The BCRUA has drilled a well there. Should they have toilets, septic system? What is the forecasted water usage at the Maintenance Building?
3. Hours of Operation and days of operation will need to be negotiated in the ILA and are covered there already. These should also be reviewed in the meeting of VOV, CP, and Travis County.
